4. Solution

4.1 Product / Service Description

Weltriq provides a **professionally managed roofing project service** for residential customers.

Instead of functioning only as a labour contractor, weltriq is designed to take responsibility for the roofing project through a structured process—from understanding the customer's requirements to final project completion.

The service model focuses on:

Requirement → Site Assessment → Planning → Quotation → Material Coordination → Execution → Quality Check → Completion

The earlier business plan describes the same organized-service principle through a structured workflow covering customer enquiry, site visit, quotation and agreement, project planning, material procurement, work execution, quality inspection and final delivery/support.

Core Solution

> **Weltriq gives homeowners one accountable partner for managing their roofing project professionally from planning to completion.**

4.2 How Weltriq Solves the Problem

Weltriq addresses the existing problems through a structured project-delivery system.

1. Requirement Understanding

Weltriq first understands:

- Customer requirements
- Building requirements
- Roofing purpose
- Expected design and finish
- Budget expectations
- Project timeline

This reduces the risk of starting work without clearly understanding what the customer actually needs.

2. Site Assessment

A site assessment is used to understand the actual project conditions before finalizing the work.

This helps weltriq identify:

- Site requirements
- Measurements
- Structural considerations
- Installation requirements
- Material requirements
- Execution challenges

3. Clear Quotation

The customer receives a clear project quotation based on the identified requirements.

The objective is to reduce ambiguity around:

- Scope of work
- Materials
- Project cost
- Deliverables
- Expected timeline
- Customer responsibilities

The earlier business model specifically identified clear quotations and customer agreements as part of its organized approach.

4. Structured Project Planning

Before execution, weltriq plans:

- Labour requirements
- Material requirements
- Project schedule
- Site execution
- Installation sequence
- Quality checkpoints

This is intended to reduce unnecessary delays and improve coordination.

5. Professional Execution

Weltriq coordinates the required workforce and executes the roofing project according to the agreed scope.

The objective is to create a consistent standard instead of depending entirely on an individual worker's personal way of working.

6. Quality Inspection

The project is checked before final handover.

Quality control is an important part of weltriq's proposed operating model because inconsistent workmanship and poor finishing are among the problems identified in the existing market.

7. Final Delivery

After completion, the project is reviewed against the agreed scope before final handover.

This creates a clearer distinction between:

“Work completed”

and

“The project was properly delivered.”

4.3 Key Features

weltriq's proposed solution consists of the following core features:

Feature	Purpose
Site Assessment	Understand actual project requirements
Clear Quotation	Reduce cost and scope ambiguity
Project Planning	Organize people, materials and schedule
Skilled Execution	Improve workmanship and finishing
Quality Inspection	Maintain execution standards

Transparent Communication	Keep customers informed
Single Point of Accountability	Reduce customer coordination
Structured Handover	Ensure agreed work is completed
Customer Support	Provide support during the project journey

These features are aligned with the earlier business plan's emphasis on professional management, scheduled execution, quality assurance, customer convenience and systematic project handling.

4.4 Customer Benefits

Functional Benefits

Weltriq aims to provide customers with:

- Less coordination work
- Clearer project scope
- Better visibility of project progress
- More organized execution
- Better quality control
- Reduced dependency on individual workers
- A clearer process from enquiry to completion

Financial Benefits

The objective is not necessarily to be the cheapest roofing provider.

Instead, weltriq aims to reduce the **hidden cost of poor project execution**, such as:

- Rework
- Delays
- Contractor changes
- Material coordination problems
- Unplanned expenses caused by unclear scope

Emotional Benefits

The most important customer benefit is **peace of mind**.

4.5 Unique Value Proposition (UVP)

The differentiation is based on **organized project delivery**.

Proposed UVP

> **“Professionally managed roofing, with one accountable partner from planning to completion.”**

What Makes This Different?

Traditional roofing service often depends heavily on:

Individual worker → Personal commitment → Informal coordination → Customer follow-up

WELTRIQ aims to create:

System → Process → Accountability → Quality Control → Customer Experience

The earlier pitch deck describes this broader differentiation as a structured, professional and customer-focused approach covering consultation, design, fabrication, installation and after-sales support, with emphasis on quality workmanship, transparent communication, timely delivery and a seamless customer experience.

For the current WELTRIQ model, the focus is narrowed to **roofing project delivery**.

4.6 Weltriq Customer Experience

The intended customer journey is:

Step 1 — Enquiry

Customer contacts weltriq

↓

Step 2 — Requirement Discussion

WELTRIQ understands the customer's requirements and expected outcome.

↓

Step 3 — Site Assessment

Project conditions and requirements are assessed.

↓

Step 4 — Proposal

Customer receives the project scope, quotation and commitments.

↓

Step 5 — Project Planning

Materials, workforce and execution schedule are organized.

↓

Step 6 — Roofing Execution

The roofing work is carried out according to the agreed scope.

↓

Step 7 — Quality Inspection

Completed work is checked.

↓

Step 8 — Handover

The project is formally completed and handed over.

4.7 The Core Transformation

Before WELTRIQ

Find worker → Negotiate → Coordinate → Follow up → Manage delays → Check quality → Solve problems

With WELTRIQ

Enquiry → Assessment → Clear proposal → Planned execution → Quality check → Handover

Therefore, weltriq is not only selling roofing materials and labour.

It is attempting to sell a **more organized and predictable roofing project experience**.

> **providing homeowners with a structured project-delivery system that combines requirement assessment, clear quotations, planned execution, skilled workmanship, quality inspection and a single point of accountability from project start to completion.**
